

ERGONOMICS AND FUNCTIONALITY AT YOUR FINGERTIPS

CONFIGURATION FLEXIBILITY

The N1L unit features a dentist's console on a double-jointed arm with 180° rotation. The handle placed on the front of the console allows an easy grab-and-move movement. The unit has a wide range of motion and is perfect to work single or four-handed. The console can accommodate up to 5 instruments and it is equipped with an autoclavable silicone mat where to place a tray-holder. The capacitive touch control panel manages all the functions of the unit and the chair. The instruments are placed in removable and autoclavable instrument holders with automatic activation sensors.

Adaptive backrest

the backrest with motorized vertical excursion is available as an optional, and it can be managed by the control panel to ensure the correct positioning of the patient's head on the headrest, whether **pediatric** or **adult**.

Chair

STANDARD BACKREST

XL MEMORY FOAM BACKREST

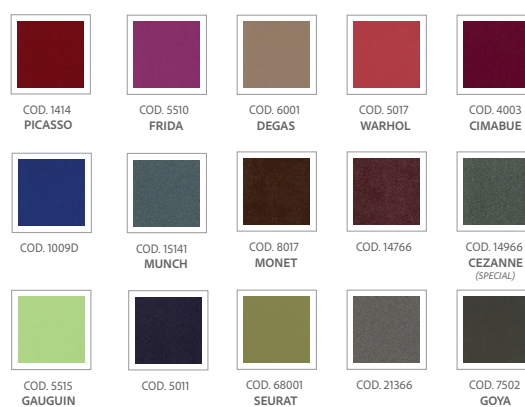

The chair is designed to offer comfort and good working ergonomics. It is covered in skai medical leather for easy sanitization. The synchronized movement of the backrest and the seat ensures optimal and prevents the sliding effect. The anatomic backrest, with lumbar support, is available in 2 versions: standard for all working ergonomics and wide in memory foam for surgery or greater comfort of the patient, ideal for long-lasting treatments.

Colours

STANDARD COLOURS

SPECIAL COLOURS

Foot controls

The foot control is solid and well-balanced with a steel base to ensure stability while working. It is equipped with a retractable handle which makes it easy to move. It is available in the standard or push version, both with cable or wireless.
